

Bulla Hill Railway

Allosaurus Fragilis

Meet **Allosaurus Fragilis** — a **fierce predator** of the Jurassic world! Think of a **big, scary lizard** with **sharp teeth and claws**, fast, strong, and ready to catch its prey.

Allosaurus lived during the **late Jurassic Period** (~150 million years ago) in **western North America**. Its name means “**different lizard**”, and it had a **big skull, short arms with three clawed fingers**, and a **long, heavy tail** to balance its body.

- **Length:** ~8.5 metres (28 ft)
- **Weight:** ~2.3 tons
- **Diet:** Meat-eater 
- Fun fact: Its **saw-edged teeth** made it a deadly hunter, and it may have even hunted Stegosaurus!

Brachiosaurus

Meet **Brachiosaurus** — the dinosaur with a **neck so long it could touch the sky!** Imagine a gentle giant towering above the trees, munching on the juiciest leaves way up high. It's like the **skyscraper of the dinosaur world!**

Brachiosaurus was one of the **biggest dinosaurs ever**, using its super-long neck to reach leaves that no one else could. It lived in **North America**, and the first fossils were discovered along the **Colorado River** in 1900.

- **Type:** Sauropod
- **Length:** ~26 metres (85 ft)
- **Weight:** 30–45 tons
- **Diet:** Plant eater, munching **200–400 kg of leaves per day!**
- Fun fact: There's even an **asteroid named after Brachiosaurus!**

Bulla Hill Railway

Diplodocus

Meet **Diplodocus** — a **super long, long-necked dinosaur**, like a giant lizard with an **extra-long neck and tail**! Walking on **all fours**, Diplodocus was a **peaceful plant-eater**, slowly strolling through the forests, munching on leaves all day.

Its name means “**double beam**” because of the strange bones in its tail. It lived in what’s now **western North America**, about **150 million years ago**, and could grow up to **35 metres (115 ft) long** and weigh **10–15 tons**!

- **Tail vertebrae:** ~80
- **Diet:** Plants 
- Fun fact: Scientists have found **lots of Diplodocus fossils**, making it one of the best-studied dinosaurs.

Pterodactyl

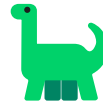

Imagine a dinosaur that could **fly through the skies** — that’s a **Pterodactyl**! Not technically a dinosaur, but a **flying reptile**, it had a **long beak, leathery wings like a bat**, and soared above lakes and forests like a superhero.

It swooped down to catch **fish or bugs** with its sharp teeth, exploring the skies of the ancient world.

- **Type:** Flying reptile
- **Diet:** Fish and small animals
- Fun fact: Think of it as a **prehistoric ninja of the skies**!

Bulla Hill Railway

Stegosaurus

Meet the **Stegosaurus** — a dinosaur that looked like a **walking tank**! Its **row of giant plates** ran along its back like armour, and its **spiky tail** was ready to defend it from predators.

Stegosaurus lived during the **late Jurassic Period** (~150 million years ago) in **North America** and Portugal. It could grow up to **9 metres (30 ft) long**, **4 metres (14 ft) tall**, and weigh nearly **5 tons** — but its brain was only about the size of a **dog's**!

- **Plates:** 17, growing from its skin
- **Tail spikes:** 60–90 cm (2–3 ft)
- **Diet:** Plants 🌿
- Fun fact: It could only move around **7 km/h (5 mph)** — slow, but armoured and mighty!

Triceratops

Meet the **Triceratops** — the **three-horned tank of the dinosaur world**! With **three big horns on its face** and a **frill around its neck**, it looked fierce but was actually a **gentle giant**, munching on leaves and bushes.

It lived during the **late Cretaceous Period** (~65 million years ago) in **North America**, defending itself from predators like **Tyrannosaurus Rex**.

- **Length:** ~8 metres (26 ft)
- **Height:** ~3 metres (10 ft)
- **Weight:** 6–12 tons
- **Teeth:** 400–800, constantly replaced
- Fun fact: Its **skull alone** could be over **2 metres (7 ft) long**, and it even appeared as a Transformer called **Slag**!

Bulla Hill Railway

Tyrannosaurus Rex

Meet **T-Rex** — the **king of the dinosaurs**! Huge, scary, and **ultimate adventure-ready**, it had **massive teeth**, **tiny but powerful arms**, and a tail to balance its giant head.

T-Rex lived in **western North America** during the **late Cretaceous Period** (~66 million years ago). It could grow up to **13 metres (42 ft) long**, **4 metres (13 ft) tall at the hip**, and weigh **7 tons**.

- **Skull:** 1.5 metres (5 ft)
- **Diet:** Meat-eater 
- **Speed:** Up to ~40 km/h (25 mph)
- Fun fact: Scientists debate if it was a **hunter or scavenger**, but one thing's for sure — T-Rex was **legendary**!

Velociraptor

Meet the **Velociraptor** — the **ninja of the dinosaur world**! Small, fast, and **super clever**, it hunted in packs and outsmarted dinosaurs much bigger than itself.

Velociraptors lived during the **late Cretaceous Period** (~73 million years ago) in **Mongolia**. They were about the size of a **turkey**, had **feathers**, sharp claws, and were **lightning-fast**.

- **Length:** ~2 metres (6.6 ft)
- **Height:** 0.5 metres (1.6 ft)
- **Weight:** 15 kg (33 lbs)
- **Diet:** Small animals 
- Fun fact: One of the most famous fossils shows a Velociraptor **locked in battle with a Protoceratops**!
